

Date: 14 December

Project Name: Estaraht Mobile App

Project Summary

The Estaraht Mobile App development is progressing steadily, with the majority of core functionalities already completed. The project is currently on track, with remaining tasks primarily focused on testing, UI refinements, and store submissions.

Key Highlights:

- Successful integration of Stripe payments
- Improved multilingual support (Arabic, English, and French)
- Resolution of multiple critical navigation and authentication issues

Main Concerns:

- Limited progress on final testing and deployment due to access-related blockers
-

Completed Work

Significant development milestones have been achieved, including:

- Full integration of Stripe Payment functionality.
- Implementation of the onboarding screens.
- Resolution of missing localization keys across Arabic, English, and French.
- Fixes to Firebase Messaging, ensuring notifications work correctly for all supported languages.
- Correction of various UI overflow issues.
- Addition of default static images for doctors who have not uploaded profile pictures.
- Fixes to several navigation issues throughout the app.
- Resolution of a repeated screen issue occurring after the splash screen.
- Fixing the OTP verification error in the patient registration and login flow.

Work in Progress ⌚

The team is actively working on the following improvements:

- Adding a loading state after user registration to improve user experience
 - Resolving remaining issues in the doctor's workflow
 - Fixing problems related to appointment pricing logic
 - Completing missing localization keys that currently have no values
 - Adding and configuring the new Gmail domain for email-related functionality
-

Remaining Tasks 📌

The following items are planned before final release:

- End-to-end testing on iPhone to validate the full user flow
 - Publishing the app on the Google Play Store
 - Publishing the app on the Apple App Store
 - Addressing remaining UI design improvements and refinements & add loadings, messages and checkers.
-

Blockers 🚫

Current blockers affecting progress include:

- Lack of access to noreply@estaraht.com , which is required for email-related features.
- Absence of a Mauritanian phone number, needed to properly test phone number validation and the Bankily payment flow.
